

HKTM establishes the ideal engineering league in the field of movement control with the group companies in addition to its being the umbrella company in terms of engineering for the partner companies that are consistent with the engineering infrastructure and specialized in their own fields.

Our company is a company specialized in different movement and control technologies and having exemplary multidisciplinary engineering solutions. With these solutions, the design, prototype, production, testing, delivery Hydro Mechanical, Mechanical, Pneumatic, Automation and Robotics, Rotary Actuator, Electromechanical Cylinder, Shock Absorber, Hydraulic Servo Cylinder and Electronic systems are provided.

*With these services that it provides, **HKTM** aims at being recognized worldwide and earning reputation with its innovation, technological products and innovative projects in the field of movement control systems.*

Therefore, in line with the targets and principles that we have established in every process from receiving customer requests to delivery and after-sales services with the systems that we design and produce in the Defense and Aviation sector, we undertake;

- To make delivery on time with effective use of the resources,*
- To simplify by eliminating the processes that do not create value,*
- To ensure continuous improvement by adopting a risk-based thinking approach,*
- To increase the awareness and consciousness of our employees with regard to the requirements in the Quality Management Systems, to fulfill the applicable legal and other requirements, to keep all of our processes under control,*
- To go beyond meeting the customer satisfaction by continuously improving our quality management system,*
- To provide transparency and traceability in every process*
- To achieve our corporate goals and objectives.*
