

## ENVIRONMENT AND ENERGY MANAGEMENT POLICY

As HKTM, we adhere to the latest environmental standards in our production areas with our environmentally-conscious building that is classified as green in terms of energy efficiency and we take into consideration the environmental impacts in all steps as from the first step of a product until its presentation to you.

HKTM agrees and undertakes to fully comply with the national and international legal obligations and standard requirements with regard to Environment and Energy,

For a sustainable future, to take the measures that are required in order to minimize our impacts on the environment in the course of all kinds of our activities, use our energy and natural resources efficiently and conduct effective works aimed at decreasing our greenhouse gas emissions,

Make efforts to prevent pollution at its source, decrease adverse impacts on the environment by holding the LEED Green Building Certificate and prevent air pollution by decreasing the carbon emission,

Continuously improve our energy performance by means of survey works and improvement projects aimed at energy efficiency,

Prefer environment-efficient and energy-efficient technologies and implementations with respect to the equipment and services to be purchased in the context of our production and new investment activities,

Continuously review and improve its Environmental and Energy Management System by integrating this system to its corporate management practices.

Because, in our perspective, engineering is primarily related with making the world a better place.
